

MORE PROTECTION, MORE PEACE OF MIND.

From preventive maintenance and remote diagnostics to equipment monitoring and automated call dispatching, WatchTower from Climate Pros keeps your operation ahead of the curve. It's the first software offering in the industry developed by technicians who understand your business — and it's the only digital service solution backed by the refrigeration and HVAC experts of Climate Pros.

WatchTower collects all relevant sensor data from your facility's refrigeration equipment — utilizing predictive AI to anticipate failures before they occur, tune systems for energy-efficient operation and improve performance over time.

WHAT IS WATCHTOWER AND HOW DOES IT WORK?

WatchTower is scalable, cloud-based software that works across any footprint, giving operators a comprehensive view of all refrigeration assets at once. All it takes is a

simple connection into your facility's existing refrigeration supervisory control system — with no additional hardware required, just an IP address.

Within minutes, you'll be up and running. WatchTower continuously monitors critical points throughout your system — collecting and analyzing data, then immediately acting if something is not functioning properly.

NO RACKS? NO PROBLEM.

WatchTower can also be a valuable tool for operations with self-contained equipment lacking centralized refrigeration systems or supervisory control applications. These facilities can still take advantage of critical monitoring, alarming and reporting functions, all backed by the experts at Climate Pros.

Cloud-based software solution scalable across enterprise footprints

*Connects via IP address
to existing refrigeration
supervisory control system*

No additional hardware needed

*Team of refrigeration experts
works with AI to interpret
data and drive solutions*

*Monitors, collects and analyzes
data from critical system points*

DISCOVER THE WATCHTOWER DIFFERENCE.

- An industry exclusive, **pairing WatchTower's predictive AI with Climate Pros' experienced technicians** to analyze, interpret and act on data
- **Lower risk** of catastrophic failure, costly downtime and loss of product
- **Custom reporting** capabilities ensuring FDA/HACCP compliance

A SMARTER WAY TO STAY AWARE.

WatchTower's advanced AI detects equipment problems before they reach a critical level. When its algorithms indicate a risk, the software diagnoses the root cause, notifies the customer's preferred maintenance provider and runs post-service checks to ensure the proper corrective action was taken.

WHATEVER IT TAKES

At Climate Pros, we take pride in being a trusted source for commercial refrigeration and HVAC systems.

Here's what sets us apart:

- Highly trained service technicians
- 24/7 emergency service
- A 90+% "one and done" repair rate
